IAP ACCURACY | CAUTI RISK REDUCTION | WORKFLOW IMPROVEMENTS

The Accuryn® Solution provides vital information from the kidney that is accurate, continuous, and remote.

- Intra-abdominal pressure at the push of a button, with continuous trends
- Patented Accuryn SmartFoley™ is designed to reduce the risk factors associated with CAUTI according to the CDC guidelines¹
- Continuous AKI surveillance²
- EMR Connectivity through Capsule™

Active Drain Technology: Air makes a u-turn at the foley barb and mechanically clears the drainage line. This patented feature addresses the need to “milk the foley” without applying negative pressure on the bladder.
